

**DEEP WATER HYDROPONIC GROWING TECHNOLOGY
TECHNOLOGIE DE CULTURE HYDROPONIQUE EN EAU PROFONDE**

HydroNov Inc. is currently installing greenhouse's hydroponic growing systems with complete operational back-up for customers around the world. HydroNov Inc has been built over the success of a small research and development project at the beginning of the Eighties that has been able to create from scratch a unique growing system.

This technique arises interest from growers and business people all over the world. Now the biggest hydroponic lettuce grower in the world, HydroSerre Mirabel Inc. is producing lettuce at a rate never reached before.

While current production figures for protected soil crops in Europe show harvests of 108 plants/m²/year, HydroSerre Mirabel Inc. is now harvesting 500 plants/m²/year in a climate far from being ideal in eastern Canada. HydroNov's technical services include technology transfer, growing system material and installation, production software, professional follow-up and turn-key project.

Outdoor Soil Farming
3 Harvests / Year

Protected Soil Horticulture
5 Harvests / Year

Protected Hydroponic Floating Technology
18 Harvests / Year
